

Cardiopulmonary Program

A Specialty Program for Serious Heart and Lung Conditions

Providing Guidance and Support for Your Patients

With your patient referral and choice of hospice care by an appropriate patient, the goal of our Cardiopulmonary Program is no longer aggressive treatment, but comfort care, condition management, and reducing unnecessary hospitalizations.

Our team supports and cares for your patients and their family members. We help your patients maintain their level of independence, whatever that may be, for as long as possible, surrounded by their loved ones in the comfort of home.

Specialized Training

- Disease-specific training for clinicians
- Consultative support from medical directors
- Knowledge of and access to community resources

Health Condition Management

- Prevention of infection and secondary complications
- Help with nutrition and hydration
- Pain and symptom management
